氧化锆金属缸套是有有以下几点优点:

- 1、寿命长;能达到4000小时以上,是普通双金属的8-10倍以上。
- 2、高硬度;氧化锆陶瓷缸套是运用相变增韧技术开发的高端产品,氧化锆原材料产自澳大利亚经过各种加工,生产出可以与钻石硬度相媲美的氧化锆陶瓷硬度HRA大于89。
- 3、耐酸碱,耐腐蚀;陶瓷特有的性能与酸碱不反应,由于体积密度能达到6.05g/m³,加工后光洁度能到0.2,高耐磨的性能体现的淋漓尽致。
- 4、韧性好;抗弯曲强度达到1000-1200MPa,在活塞的往复运动中能承受更

高的压力，最高承受70MPa的泵压。

- Zirconia exhibits better impact strength.
- Zirconia is harder than alumina.
- Zirconia can be honed to finer surface finishes than alumina. Finished to 4 RMS, the zirconia liners provide a surface finish that's three to four times finer than alumina.

All three of these property advantages translate to lower ownership costs. The improved wear directly extends the service life of the sleeve, while the improved impact strength cuts down on the significant costs of replacing broken liners in the field. The surface finish improvements, meanwhile, have an indirect effect. The finer surface finish means less friction with the elastomer-and-metal pump pistons, which in turn extends piston life and reduces pump-cooling requirements.
